This is a preliminary report. Results provided on this report reflect only those data available at the time of issuance. For any samples which were determined to be "suspect" or "presumptive" during microbiological analysis, confirmation is in progress to determine whether the organism in question is present. Complete and final results will be issued on a Certificate of Analysis when all testing is complete.

The data pertains solely to the analytical and sampling procedure(s) used and the condition and homogeneity of the sample(s) as received. The data therefore may not be representative of the lot or batch or other samples. Consequently the data may not necessarily justify the acceptance or rejection of a lot or batch, a product recall or support legal proceedings. It is the responsibility of the client to provide all information relevant to the analysis requested. The report does not imply that Silliker Australia has been engaged to consult upon the consequences of the analysis and for any action that should be taken as a result of the analysis. This report shall not be reproduced except in full, without the written approval of the laboratory.
